

# ZECK CONNECT REMOTE DIAGNOSTICS

## MACHINE GENERATION V007

The new ZECK CONNECT remote diagnostics system scans machine data, and analyses and processes information for all pullers, tensioners and puller-tensioners. All the data is presented on the ZECK Connect Portal.

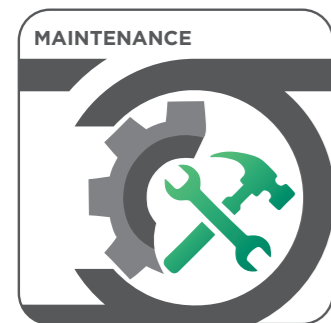

Our Technical Support can provide targeted support using the available data at any time. If a ZECK service technician is needed on site, this data enables us to optimally and accurately prepare for our visit.

### DAILY MONITORING OF MACHINES

Data query by ZECK CONNECT enables daily monitoring of your fleet via:

- ▶ Machine usage statistics
- ▶ Monitoring of technical machine data, such as temperature, hydraulic system pressure and operating hours
- ▶ Monitoring of machines and their productivity

### PROACTIVE MAINTENANCE

- ▶ Low downtime, thanks to anticipatory maintenance of machines
- ▶ Automatic detection of operating hours
- ▶ Quick provision of tools and spare parts required for maintenance
- ▶ Improved machine availability

### GEOFENCING – LOCATION TRACKING

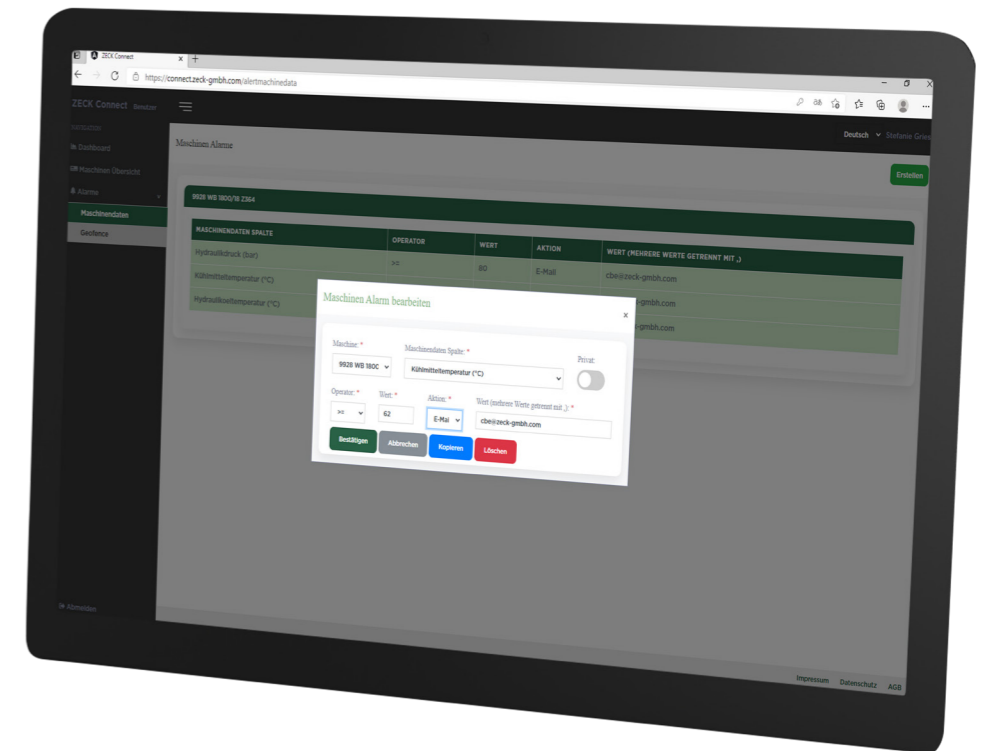

- ▶ The locations of all ZECK machines are tracked and displayed on a map on the ZECK Connect Portal
- ▶ ZECK CONNECT can be used to define virtual fences, allowing the machine location to be monitored. If the machine leaves the defined area, a notification is sent by the system (theft protection)

### ZECK CONNECT SUPPORT

ZECK Connect App – the ground-breaking tool connecting users and operators.

If a service is required, all the necessary data are collected and forwarded to ZECK After Sales. This enables our team to provide targeted remote support or prepare for a pending service visit.

### ZECK CONNECT APP

ZECK Connect App – wirelessly transfer cable hoist data directly from the machine to a smart-phone/tablet (download, view, share/forward).

### ZECK CONNECT PORTAL

Get an overview of all machine and cable hoists in your fleet.

### SYSTEM AVAILABILITY

- ▶ Available for all ZECK machines in Generation V007 from 2022
- ▶ Interface for ZECK on Site (ZOS) BIM/construction site software
